

Phase 9: Reporting, Dashboards & Security Review

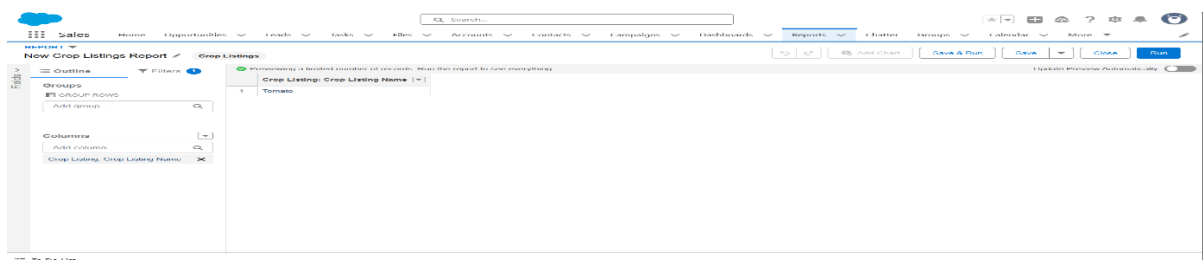

AgriConnect

Salesforce-Based Farmer Support & Marketplace System

In this phase, we focus on building Reports and Dashboards for insights, and implementing Security Controls to ensure that data is visible only to the right people. This strengthens both analytics and compliance in the AgriConnect application.

Step 1: Reports (Tabular, Summary, Matrix, Joined)

- Reports help us analyze system data such as Crops, Farmers, Orders, Marketplace activity, and Consultations.
 - Tabular Reports – simple lists (e.g., all Farmers in Andhra Pradesh).
 - Summary Reports – grouped totals (e.g., Orders by District).
 - Matrix Reports – data compared by rows and columns (e.g., Crops by State vs Season).
 - Joined Reports – multiple report blocks combined (e.g., Farmer details + Orders in one report).
- Insert images of:
 - New Report screen (showing selection of report type).
 - Sample Tabular, Summary, Matrix, and Joined report outputs.

Step 2: Report Types

- Report Types define what objects and fields are available for reporting.
 - Go to **Setup** → **Report Types** → **New Custom Report Type**.
 - Example: **Crop Listings (Primary Object)** → **Orders (Related Object)** for combined reporting.
 - Store report types under **AgriConnect Custom Report Types** folder for clarity.
- Insert image of: **Report Type** creation screen.

Step 3: Dashboards

➤ Dashboards visualize reports with charts, graphs, and metrics for decision-making.

- Go to **App Launcher** → **Dashboards** → **New Dashboard**.
- Example Dashboards:
 - **Crop Overview Dashboard** – Total crops by state/district.
 - **Orders Dashboard** – Pending vs Completed Orders.
 - **Farmer Support Dashboard** – Active consultations by crop type.

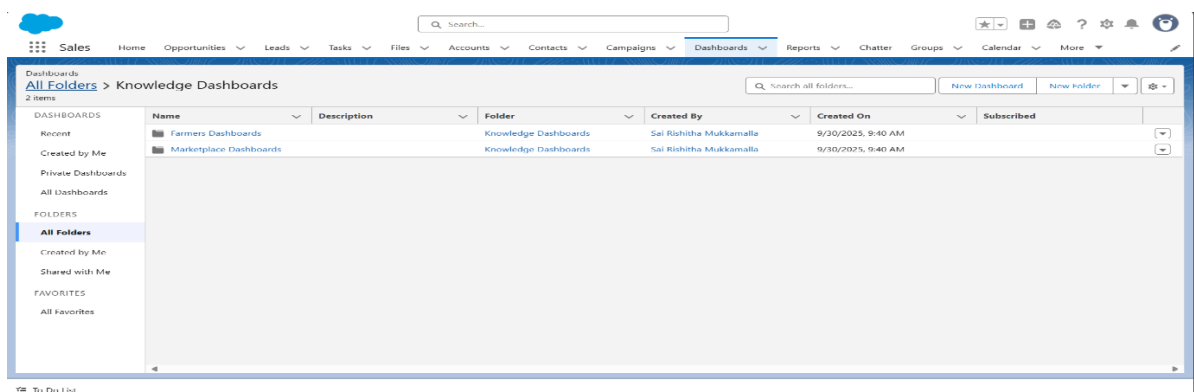

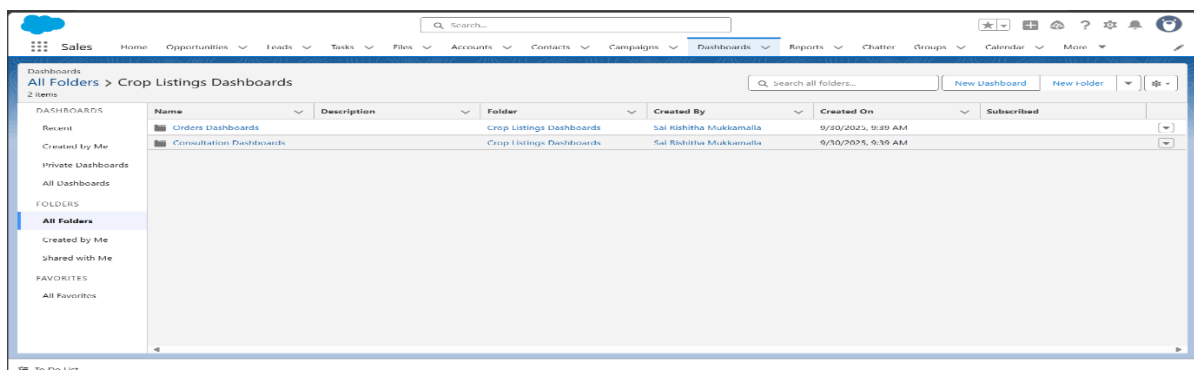

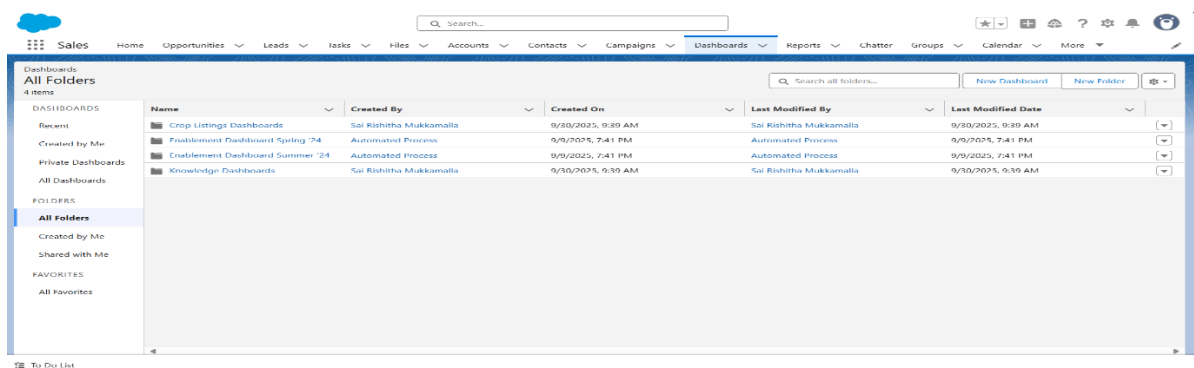

- **Marketplace Dashboard** – Product demand vs supply.

➤ Create folders like:

- AgriConnect_Crop_Dashboards
- AgriConnect_Order_Dashboards
- AgriConnect_Marketplace_Dashboards

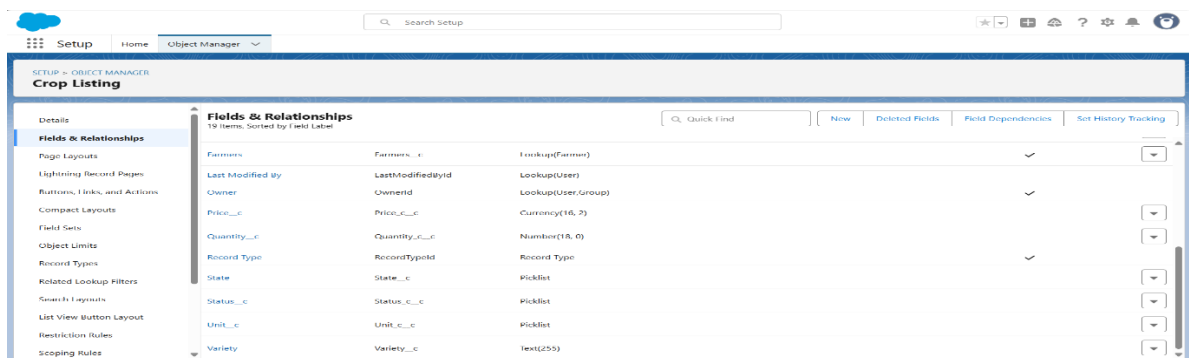

➤ Insert images of:

- **New Dashboard screen.**
- **Example dashboard with charts.**

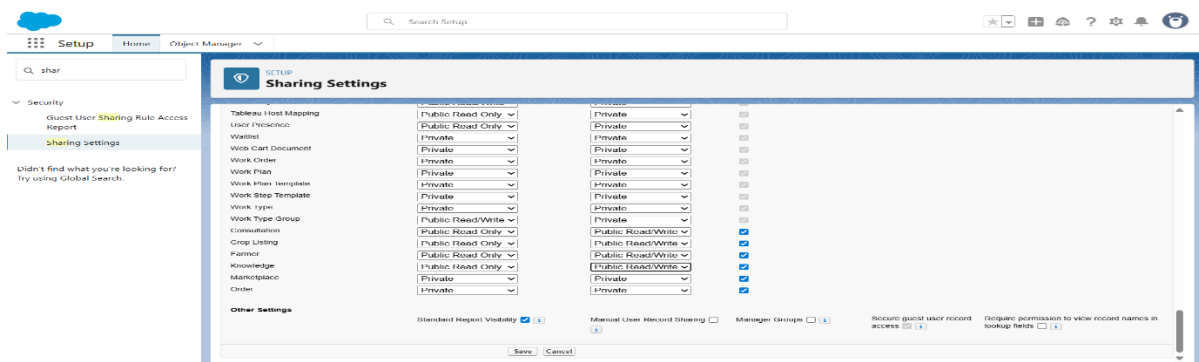

Step 4: Dynamic Dashboards

- Dynamic dashboards let each user see data according to their own access.
 - Open dashboard → **Edit Properties** → **View Dashboard As** → **Run as Logged-in User**.
 - Save in the correct dashboard folder.
 - Test with users having different roles (e.g., Farmer vs Admin).
- Insert image of: **Dashboard Properties** → **Run as logged-in user**.

Step 5: Sharing Settings

- Controls record-level visibility.
 - Setup → **Sharing Settings**.
 - Define **Organization-Wide Defaults (OWD)** (e.g., Orders = Private, Knowledge = Public Read Only).
 - Create **Sharing Rules** for role-based access (e.g., District Admins can view all Farmers in their district).
- Insert image of: **Sharing Settings** page with OWD + Sharing Rules.

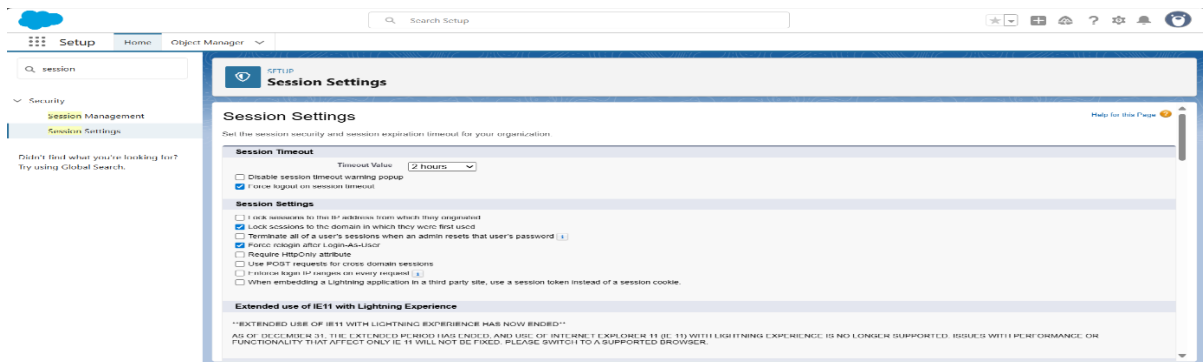

Step 6: Field Level Security (FLS)

- Restricts access to sensitive fields.
 - Go to **Setup** → **Object Manager** → [Object] → **Fields & Relationships** → **Field-Level Security**.
 - Example: Hide **Aadhaar Number** field from standard Farmer users but allow Admin access.
- Insert image of: **Field-Level Security setup for a sensitive field.**

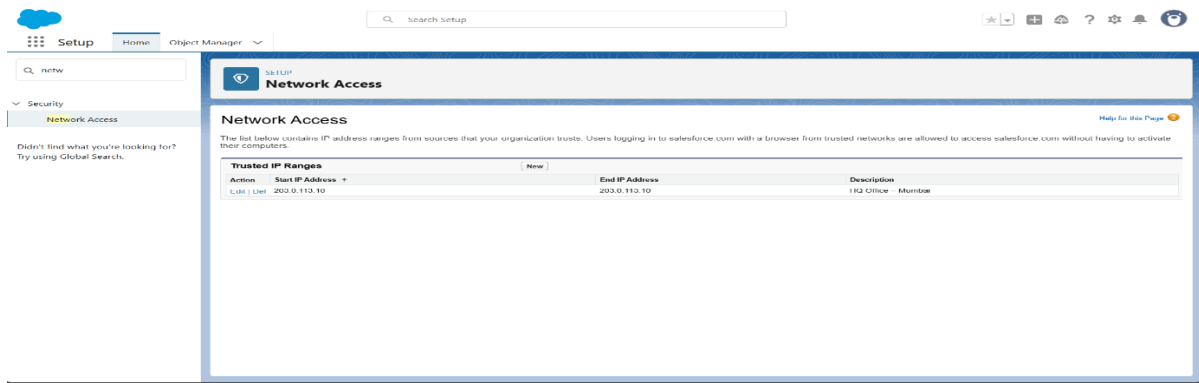

Step 7: Session Settings

- Enhances login security.
 - Setup → **Session Settings**.
 - Configure: Session Timeout, IP address persistence, HTTPS-only login.
 - Example: Auto logout after 30 minutes of inactivity.
- Insert image of: **Session Settings page.**

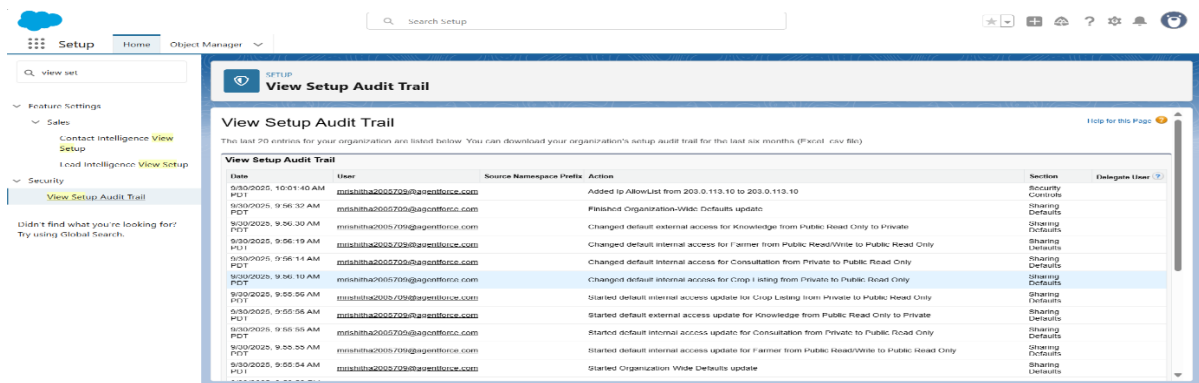

Step 8: Login IP Ranges

- Restrict logins to trusted networks.
 - Setup → **Profiles** → **Select Profile** → **Login IP Ranges**.
 - Example: Farmers may log in from public IPs, but Admin/Support profiles restricted to office IP ranges.
- Insert image of: **Profile** → **Login IP Ranges setup.**

Step 9: Audit Trail

- Tracks all configuration changes made by users.
 - Setup → **View Setup Audit Trail**.
 - Helps monitor who changed security settings, fields, or dashboards.
- Insert image of: **Audit Trail history list**.

Conclusion

Phase 9 of the AgriConnect project ensures that the system is both **insightful** and **secure**. By implementing **Reports** (Tabular, Summary, Matrix, Joined) and **Dashboards** (including Dynamic Dashboards), stakeholders can monitor crop listings, orders, consultations, marketplace activity, and farmer data effectively. At the same time, robust **security measures** such as **Sharing Settings**, **Field-Level Security**, **Session Settings**, **Login IP Ranges**, and **Audit Trail** guarantee that sensitive data is protected, users see only what they are authorized to access, and all administrative changes are traceable. Together, these reporting and security features provide a **comprehensive, user-aware, and compliant system**,

enabling informed decision-making and safe operations across the AgriConnect platform.
